Safee Ullah Khan

Flutter Developer

safeeullahkhan00@gmail.com | +92 311 4179674 | LinkedIn | Github

Summary

Third-year Computer Science student at Air University with hands-on Flutter development experience, including a production Android app published on Google Play and an active SaaS-based school management system.

Technical Skills

Mobile Development: Flutter, Dart, REST APIs, State Management, Cross-Platform App Development

Programming Languages: Dart, C++, Python, Java, SQL, HTML/CSS

Databases & Backends: Supabase, Oracle SQL, MongoDB, SSMS

Tools & Platforms: Git, GitHub, Android Studio, VS Code, Jupyter Notebook

Frameworks & Libraries: Flutter, Pandas, NumPy, Matplotlib, Seaborn, OpenCV

Experience

Flutter Developer Intern | Invotyx, Islamabad *July 2024 - September 2024*

- Collaborated within an **Agile/Scrum** workflow to design and deploy Flutter UI screens and integrate core **REST APIs**, accelerating feature delivery cycles by executing daily code deployments.

Projects

SaaS-Based School Manager App — **Flutter, Supabase, Dart**

- Developing a multi-tenant SaaS school management application utilizing **Supabase** and **Dart**, implementing **Role-Based Access Control (RBAC)** to securely isolate admin, teacher, and student data modules.

FilCon – Multi-Format File Converter & Document Scanner — **Flutter, Dart, C++, OpenCV, JNI**

- Built an offline-first Android app combining file conversion (PDF, DOCX, TXT, JPG, PNG, JPEG with batch support), PDF tools, and a CamScanner-style document scanner with automatic edge detection and perspective correction
- Optimized image processing latency by bridging **Flutter and native C++** via **Android NDK/JNI**, resulting in real-time edge detection and perspective correction for document scanning.
- Engineered and deployed an offline-first file conversion Android application to Google Play; orchestrated a closed-testing cohort of **20+ active users** to gather UX feedback and ensure stability.

Data Analysis Projects — **Python, Pandas, Matplotlib, Seaborn, SciPy**

- Time Series Data Visualizer & Sea Level Prediction Analysis — analyzed time series and NOAA sea level datasets using line plots, bar charts, statistical summaries, and regression to predict future trends.
- Medical Data Visualizer & Demographic Data Analyzer — visualized health and census datasets to surface key relationships using pandas aggregation

Education

BS Computer Science — Air University, Islamabad *2024 – 2028*
